

CLAIMS

1. A golf tee comprising a shaft adapted for insertion into a surface of ground, a
pivotal support portion mounted atop an upper end of the shaft, the pivotal
support portion having a plurality of upright prong members mounted thereupon, the
prong members being adapted in use to support a golf ball placed thereon:

2. A golf tee in accordance with claim 1, characterised in that the pivotal
support portion is threadingly engaged with the upper end of the shaft.

3. A golf tee in accordance with any one of the preceding claims, characterised in
that the pivotal support portion has an upper portion and a lower portion, wherein
the upper portion includes a pivotal portion.

4. A golf tee in accordance with claim 3, characterised in that the pivotal
portion is pivotably mounted adjacent the upper end of the shaft by a pivotal
connection means.

5. A golf tee in accordance with claim 4, characterised in that the pivotal
connection means is a ball and socket assembly.

6. A golf tee in accordance any of claims 3 to 5, characterised in that the lower
portion of the pivotal support portion is provided with a socket, wherein the
pivotal portion is complementary in configuration to the socket, the pivotal
portion of the upper portion being adapted to be engagingly received by the socket.

7. A golf tee in accordance with any one of the preceding claims, characterised in
that the shaft is provided with a stopper portion disposed adjacent to the upper end of
the shaft.

8. A golf tee in accordance with claim 6, characterised in that the stopper portion is provided with a downwardly sloping surface.

9. A golf tee in accordance with claim 7, characterised in that the downwardly sloping surface has a gradient of 25° to the horizontal.

5 9. A golf tee in accordance with any of claims 7 to 8, characterised in that the stopper portion is provided with a guidance marker, wherein the guidance marker is disposed diametrically opposite the downwardly sloping surface.

10. A golf tee in accordance with any of claims 6 to 9, characterised in that the stopper portion is provided with a plurality of leg portions extending downwardly
10 from a lower surface thereof.

11. A golf tee comprising a base portion with at least one cavity and at least one
pivotal support portion pivotably mounted on an upper surface thereof, the or
each pivotal support portion having a plurality of upright prong members
mounted thereupon, the prong members being adapted in use to support a golf ball
15 placed thereupon, wherein the or each pivotal support member is receivable
within the cavity.

12. A golf tee in accordance with any one of the preceding claims, characterised in that the pivotal support portion has three prong members mounted thereupon.

13. A golf tee in accordance with any one of the preceding claims, characterised in
20 that each prong member has a pointed portion at an upper end thereof.

14. A golf tee in accordance with claim 14, characterised in that each pointed portion is substantially conical.

15. A golf tee in accordance with any one of the preceding, characterised in that the prong members are equidistantly and equiangularly arranged upon the pivotal

support portion in a substantially annular configuration, thereby forming a support surface to support a golf ball placed thereupon, whilst maintaining minimal contact therewith.

5 16. A golf tee in accordance with any of the preceding claims, characterised in that the prong members are arranged in close proximity to each other upon the pivotable support member, the arrangement of the prong members defining a space therebetween, wherein a golf ball placed atop the prong members has minimal surface area disposed within the space.

10 17. A golf tee in accordance with any one of the preceding claims, characterised in that a longitudinal length of the plurality of prong members on a single pivotable support portion is substantially the same.

18. A golf tee in accordance with any one of the preceding claims, characterised in that the longitudinal length of the prong members is variable and selected to suit a particular intended golf stroke.

15 19. A golf tee in accordance with any one of claims 11 to 19, characterised in that the base portion comprises a first portion having a substantially horizontal upper surface, and a second portion having a downwardly sloping surface.

20. A golf tee in accordance with claim 20, characterised in that the downwardly sloping surface has a gradient of 25° to the horizontal.

20 21. A golf tee in accordance with any one of claims 11 to 20, characterised in that the base portion has three pivotable portions pivotably mounted thereupon.
